Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 14-16, drawn to a method of chromatographically analyzing, classified in class 210, subclass 656.
- II. Claims 17-18, drawn to pump shut-down control device, classified in class 210, subclass 143.

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus could be used for another and materially different process. For example, the apparatus could be used as pump shutdown means in a filtration process.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

A telephone call was made to Kevin Carroll on June 4, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.
